Behavioural Management

- o Occupational Therapy
- o Physiotherapy

Special Education with Vocational Guidance

Psychology

- o Various psychological tests including Psychometry
- o Counselling

জীবনের অধিষ্ঠানো মুছে জিঁতে শেষ বয়সে এখন কানের
প্রবলমেব কণ্ঠ হার মানতে হল, ব্যাপারটাকে গুঁত
ভিঁকুই দিই নি। শোনার আর কিই বা আছে বাকি?

উঁপিরটা দিলে আমার ছোটো নাতি। গুর আধো আধো
কথাগুলো এখন কানের প্রবলমেব জন্য গুঁতে পলম
না, বুঝলাম জীবনের বশি আননমুহূর্ত শোক নিজেকে
বক্ষিত করছি।

iHEAR করে দিলে জেই সুশোভ। আজ আমি
জান-জান-জান্ডায় আবার বাঁচার ইচ্ছেশক্তি ফিরে
পেয়েছি। তাঁই বলাছি, নিজেকে আর বক্ষিত রাখবেন না।
কনসাল্ট করুন অধিষ্ঠিত অডিওলজিস্টের সাথে, বরণ

‘জীবনে শোনার এখনো
আনেক কিছু আছে বাকি।’

Types of Hearing Aids

Behind the Ear (BTE)

BTE fits behind the ear, connected to the ear mould or dome; from there a sound tube that goes down to the ears amplifies the sound. It is suited for the patients from mild to profound hearing loss category.

In the Ear (ITE)

ITE fits in the outer ear bow (concha). It is smaller and much lighter than BTEs. Advantages of such kind of device include improved sound quality, reduced case size, 'open fit' technology and reduced feedback.

In the Canal (ITC)

ITC hearing aids are best suited for mild to severe hearing loss that are custom made, comes in smaller size with better technical advancement. They can accommodate important features such as a volume control wheel, push button, and directional microphone.

Completely in canal (CIC)

CIC fits completely into the ear canal thus virtually unseen, and therefore satisfies cosmetic requirement of the patient.

Invisible-in-the-canal aids (IIC)

IIC aids fits deeper into the ear canal. The cosmetic advantages of this fitting style appeal to a wide variety of hearing aid candidates, especially those who do not consider visible hearing aid as an option.

HA devices are available from Rs. 6000/- onwards

Dos & Don'ts for Preventing hearing loss

- Avoid loud and excessive noises such as motorcycles, music players or power tools that can damage your hearing.
- Avoid putting foreign objects to clean your ear canal. Have the wax cleaned through a warm flannel or by your doctor.
- Wear swimmer's ear plugs or a swim cap amidst high speed water sports such as water skiing.
- Wear safety protection or ear muffs while mowing the lawn or shooting the gun.
- Even up regularly while taking part in activities such as scuba diving or flying that can cause ear damage, dizziness and hearing loss.
- If you are still experiencing difficulties after taking part in the activities then seek some professional advice before taking part in such activities again.
- Check your medications like antibiotics or drugs with your doctor so as to make sure that it does not pose a threat to your hearing.
- Use earplugs instead of cotton wool as it can damage your hearing when pushed a bit far.
- Do make an appointment to get your hearing tested if are having trouble hearing conversations, is exposed to loud noises regularly, have family members or relatives with hearing loss, or experiencing a ringing sound in your ears.

We are proud to be associated with...

The importance of binaural fitting

- There are many reasons as to why Binaural fitting is an effective equipment for people who are facing hearing problems.
- It provides natural hearing with both ears.
- Better sound quality than other equipments.
- Experience better hearing of music.
- Better understanding of speech even in the noisiest of situations.
- Better understanding of speech through the greatest of distances.
- It provides sober hearing comfort eliminating the tinnitus effect.
- It makes up for the hearing deprivation of both the ears.
- It offers better sound sources localization.
- You will gain confidence through better listening.
- Usage of the equipment will lead to less listening efforts and cause less anxiety.
